Query, Reporting, and Analytics for IBM i Users

Automating and Simplifying IBM i Analytics and Reporting with *NGS-IQ*

The people who need to see and analyze your IBM Db2 on i data are most comfortable studying it in spreadsheets and visualizations. Writing queries that provide the right data to those users takes your IT staff away from other projects. And formatting that data after it's been delivered is a poor use of your business analysts' and managers' time.

Learn how *NGS-IQ* can enable you to deliver the right data, to the right people, in the right format.

We encourage you to watch this presentation if your company still uses IBM Query/400, needs to migrate from DB2 Web Query, or needs a better way to support Microsoft Power BI users.
